

SHERIFF

Redefining Threat Intelligence

There's no escaping the Sheriff.

Cybersecurity is a constant battle against increasingly sophisticated threats. Sheriff keeps you ready with a browser-based threat intelligence feed covering ransomware, leaks, and threat actors.

Integrate via API with platforms like Telegram or Slack for real-time intel summaries. Designed for professionals, Sheriff delivers a customized news feed that's essential in staying ahead.

ALWAYS FIRST

Sheriff equips you with timely, actionable threat intelligence—often before even official sources. By combining in-depth analysis with flexible data delivery, our platform ensures you're always a step ahead, empowering swift, informed decisions to safeguard your organization.

THREAT INTEL FOR ALL

Whether supporting executives or security specialists, Sheriff has you covered. The “Classic” version provides busy execs with a daily, organized summary of critical cybercrimes. For those needing raw intel, the “Engineer” version delivers detailed threat data - including IPs and file hashes - via Telegram or Slack.

PREMIUM FEATURES

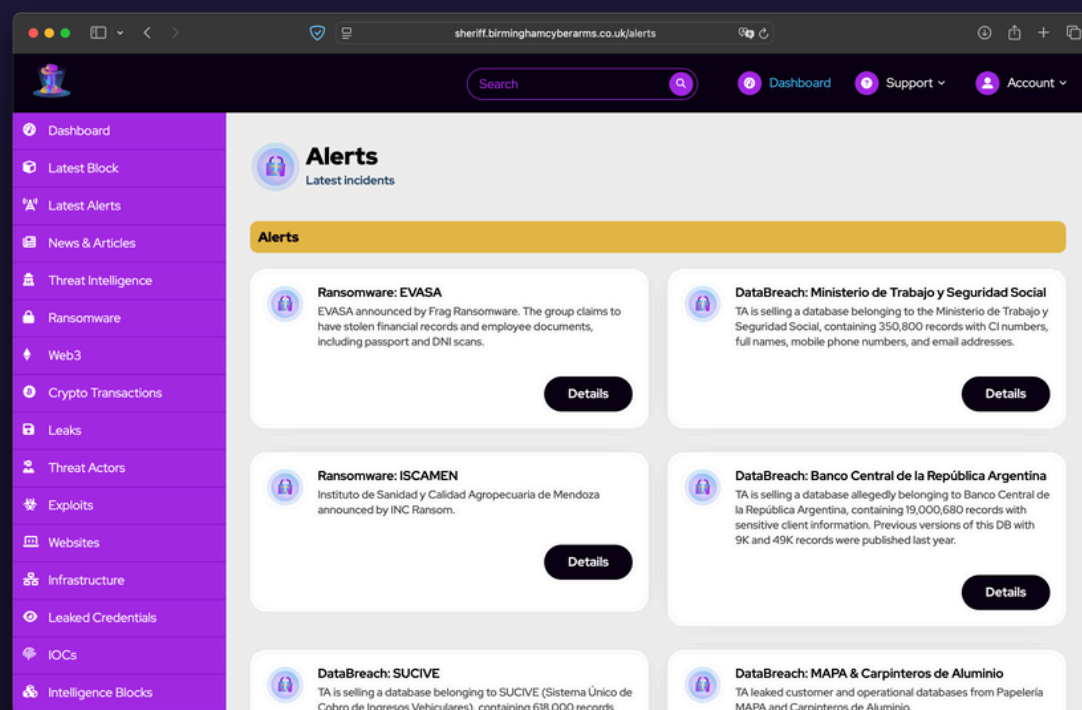

Sheriff offers premium monitors to keep you informed and protected:

- ✓ **Data Breaches:** Monitor data breaches in both public and private sectors.
- ✓ **Threat Actors:** Gain valuable intelligence on TAs' campaigns and tactics.
- ✓ **Website and Channels:** Track TAs' websites and communication channels.
- ✓ **Infrastructure:** Stay informed about malicious assets and infrastructure.

FEATURES

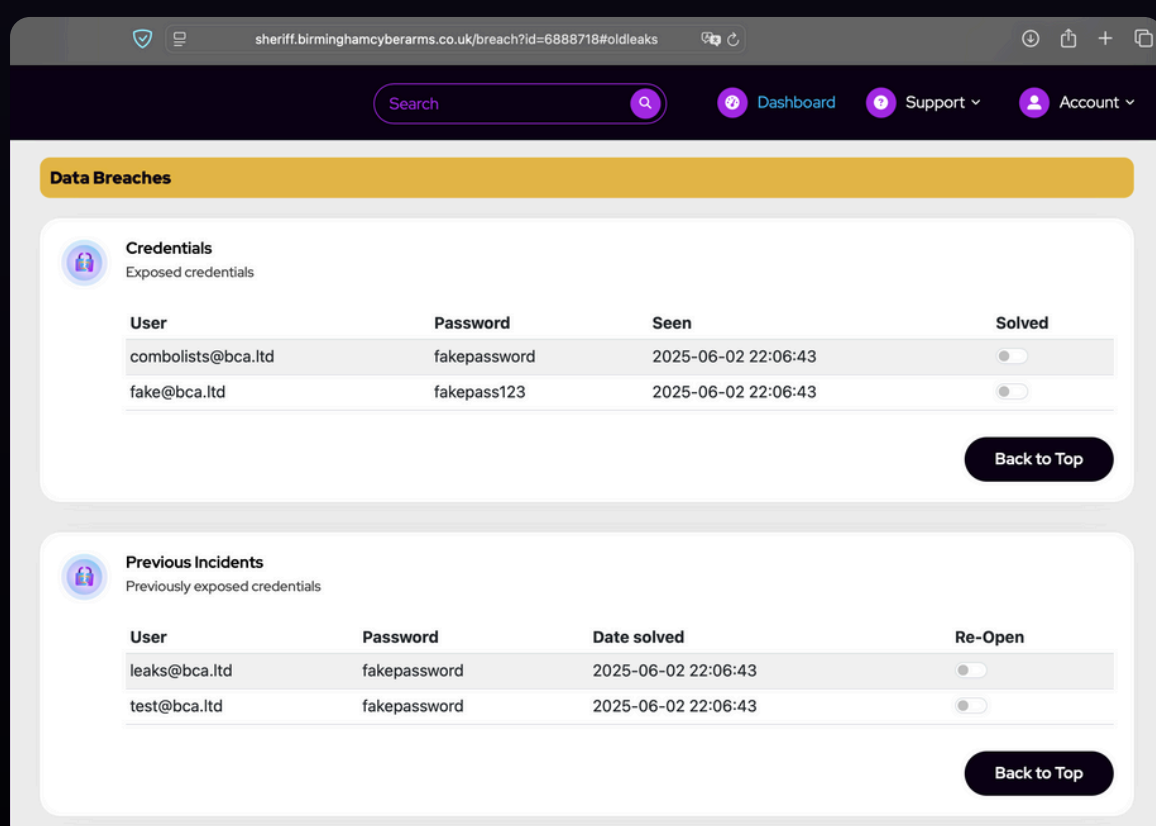

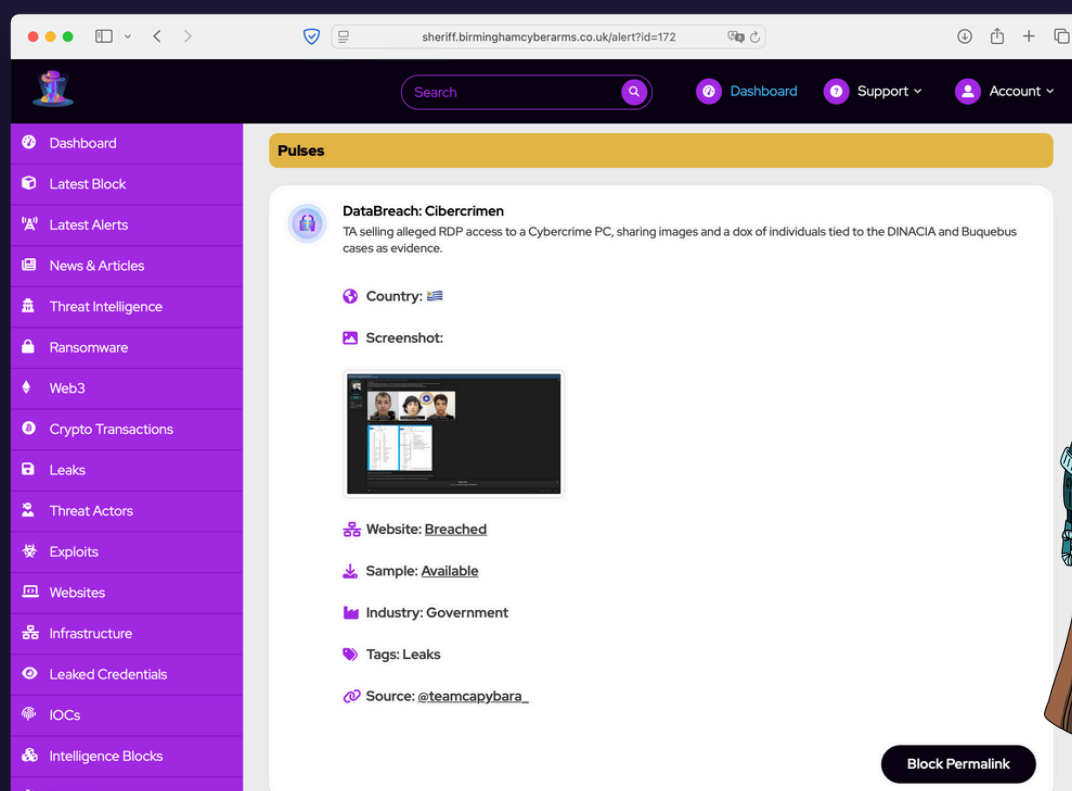

Leaks don't wait.
Neither do we.

Users can browse the latest incidents (breaches, ransomware) almost in real time after they happen.

Full disclosure. Every time.

Users can view detailed information for each incident, including uncensored and unwatermarked screenshots, links, associated threat actor(s), malware, affected industries, and any samples shared by the threat actor (when available). This is especially useful for analysts and journalists who prefer not to lurk on dark web forums and expose themselves to unnecessary risk.

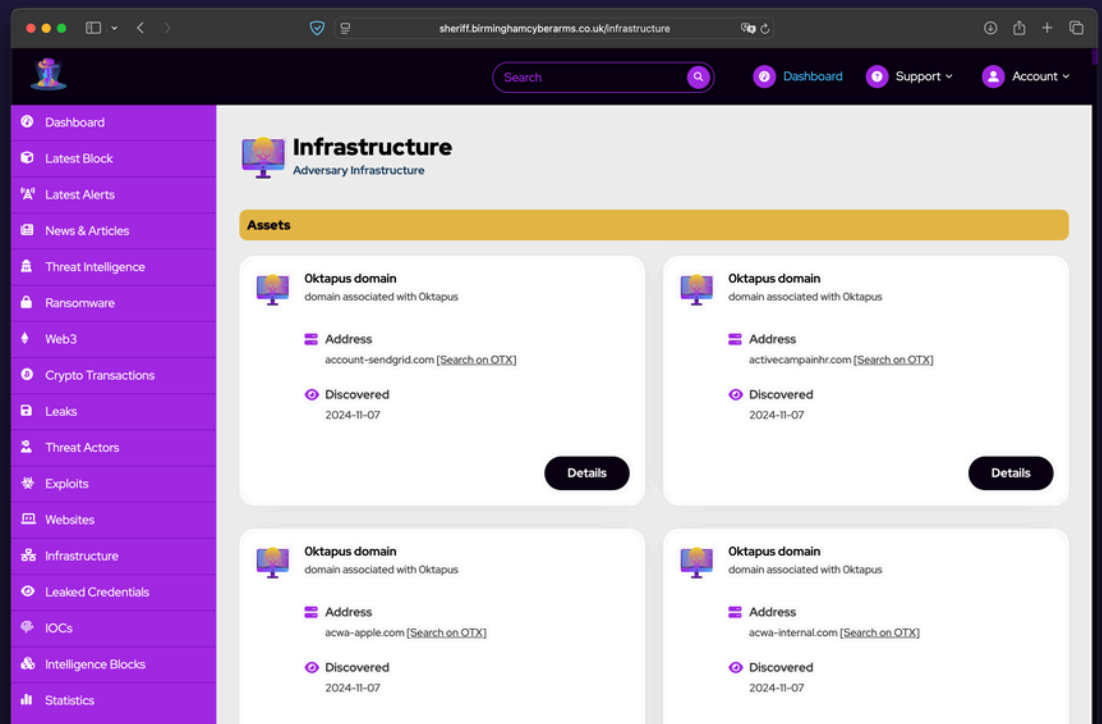

Be the first to know

We monitor leaked credentials and offer a quick, simple way for users to remediate them and track new leaks as they appear.

FEATURES

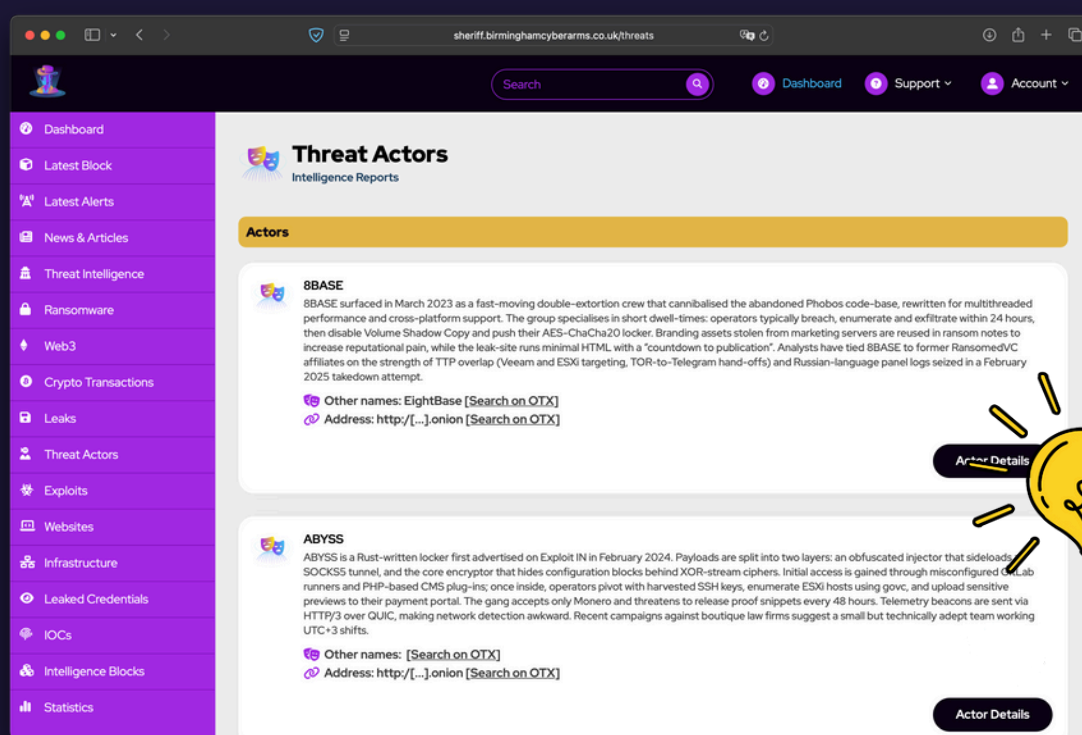

Block them at the source

We provide visibility into adversary infrastructure, including IP addresses, tool hashes, websites, and servers. This helps users understand where the adversary operates and how they may approach their enterprise.

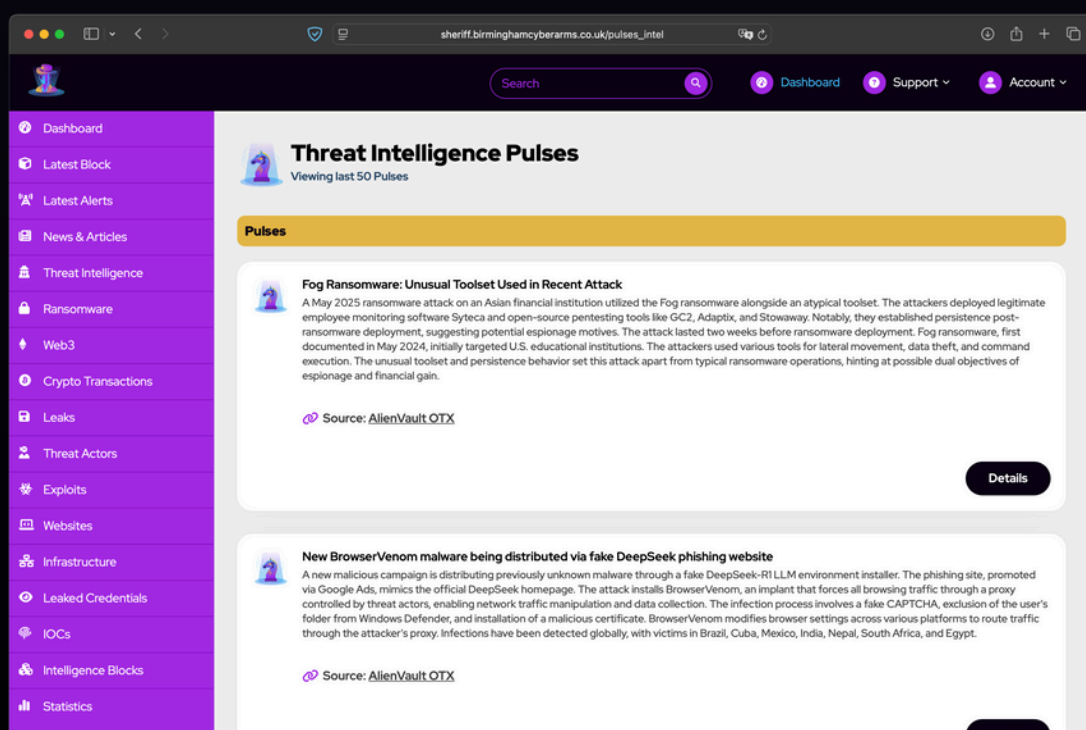

You're on their list. They're on ours.

We maintain dossiers on threat actors — whether organised cybercrime groups or ransomware gangs — detailing how they operate, where they're active online, and how to proactively defend against them. Occasionally, we may also publish interviews with them.

Know their next step

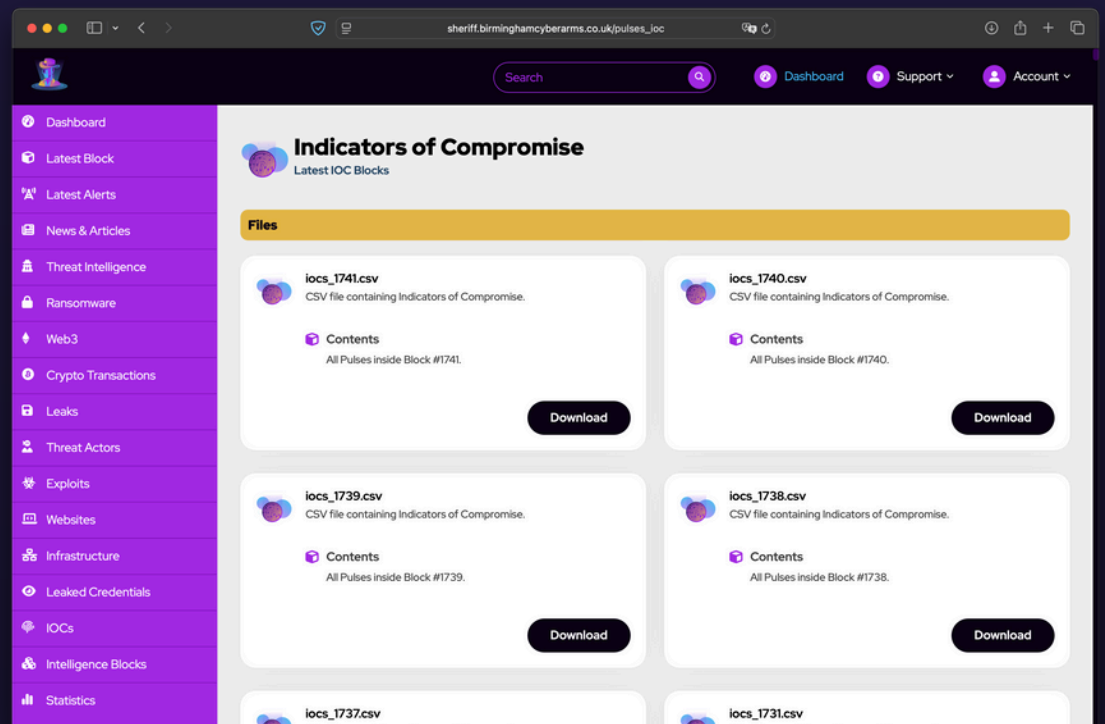

We provide intelligence pulses on emerging malware, newly identified adversaries, group rebrandings or alliances, new vulnerabilities, malware outbreaks, active campaigns, and more.

FEATURES

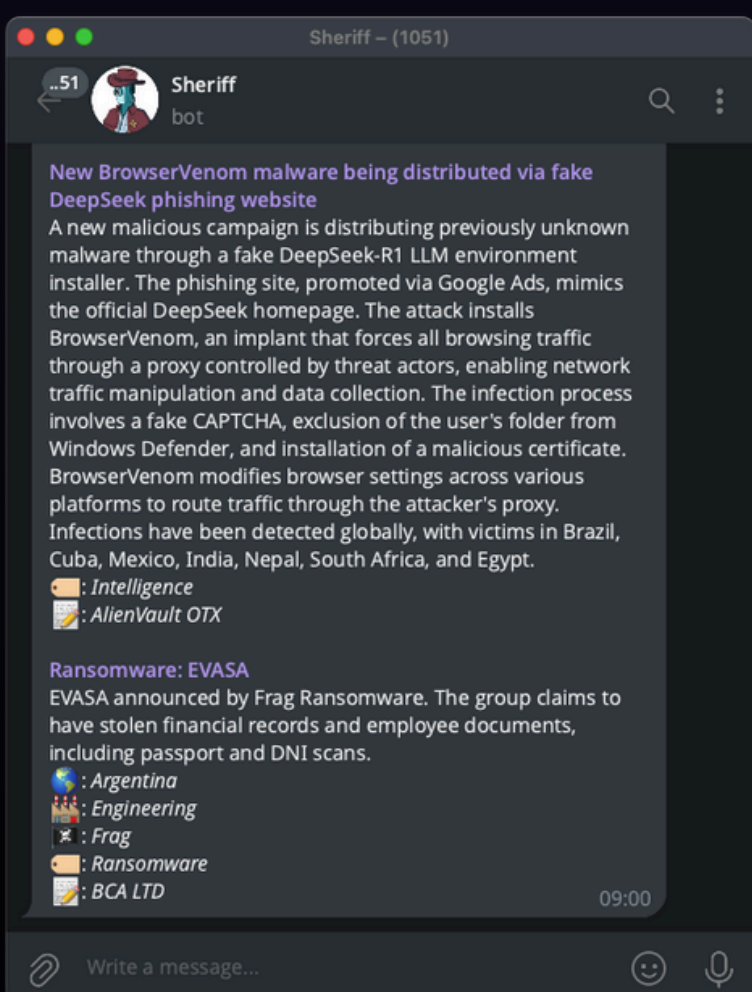

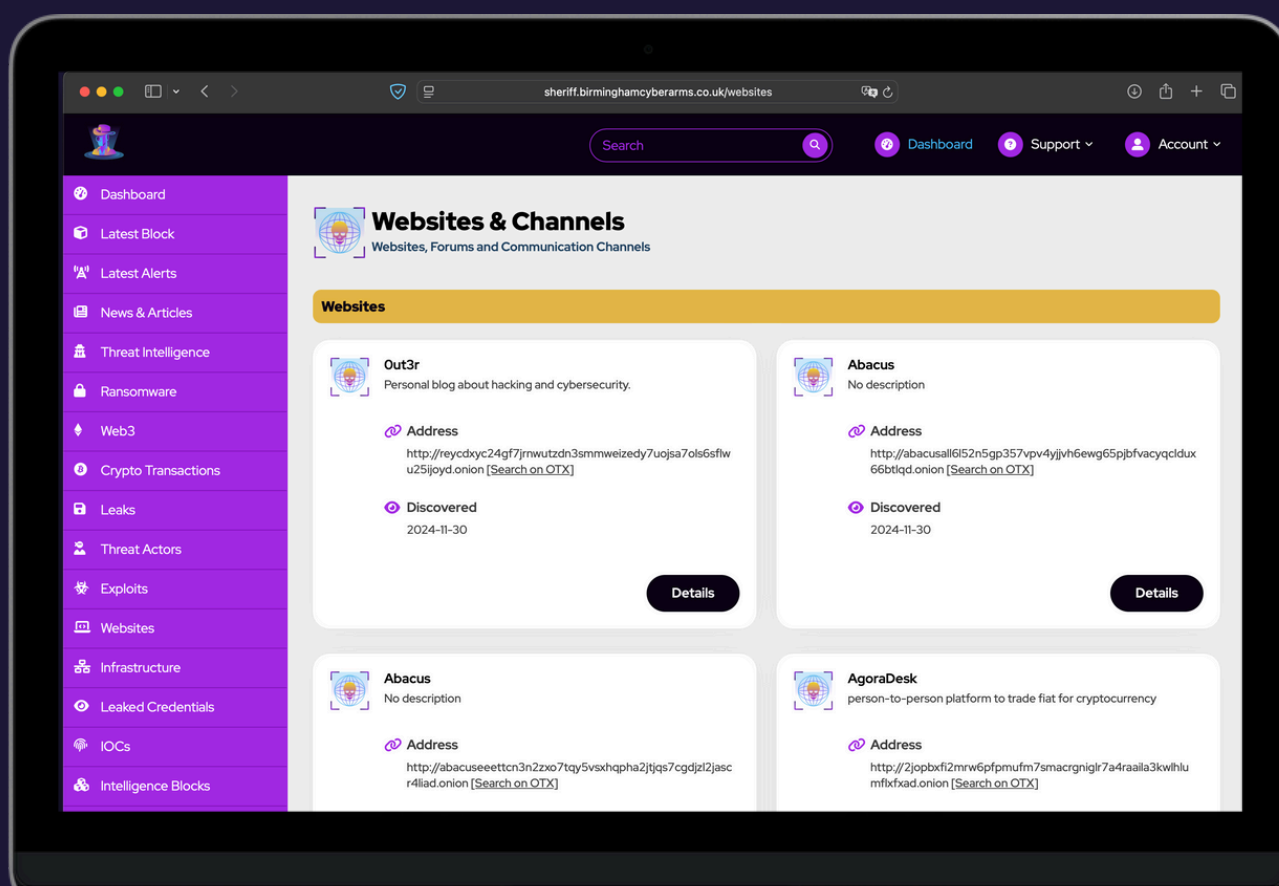

Upgrade your stack

For advanced users, we offer seamless integration of Indicators of Compromise (IOCs) such as IPs, hashes, domains, etc., so that Sheriff can enrich your existing setup or integrate into other enterprise intelligence platforms.

Your map to the underground

We offer visibility into dark and deep web cybercriminal markets, ransomware gangs' dedicated leak sites, and other cybercriminal exchange channels — whether they are standalone websites or hosted on chat platforms.

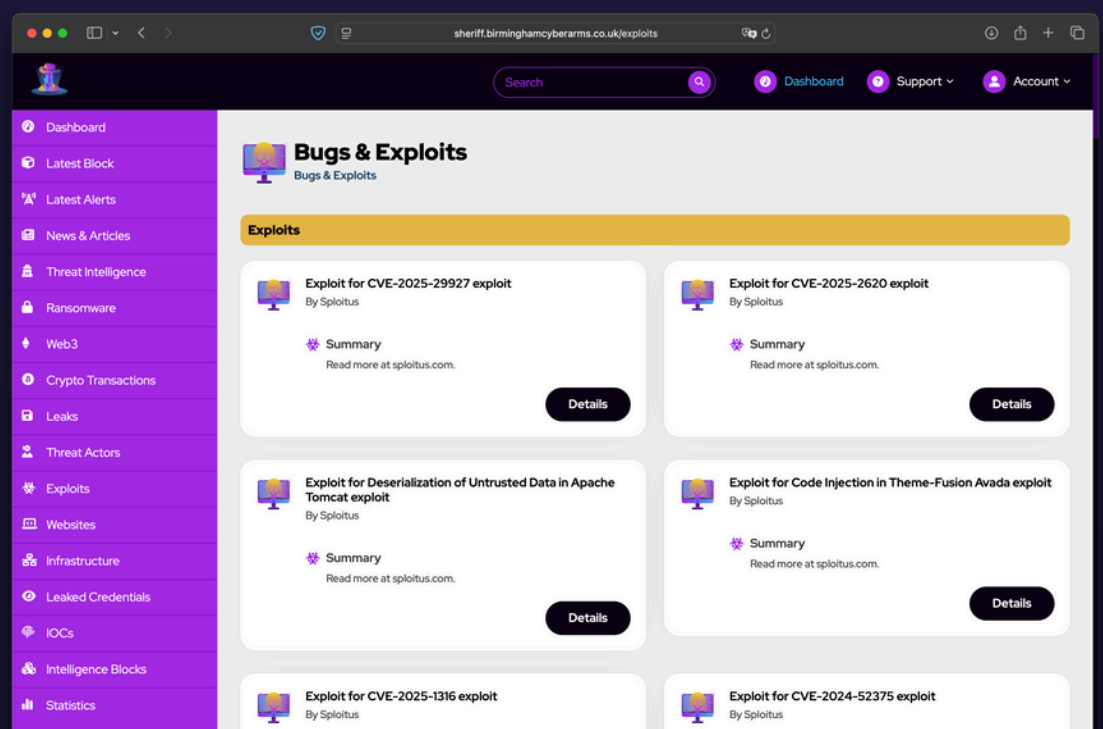

Intel anywhere, anytime

Sheriff can be easily integrated into Telegram, Slack, and other platforms, processes or pipelines to deliver real-time reports — whether you're an executive wanting a summary or an engineer (or a system) focused on technical indicators. Users can customise their preferences to receive only the topics they care about, such as ransomware updates only.

FEATURES

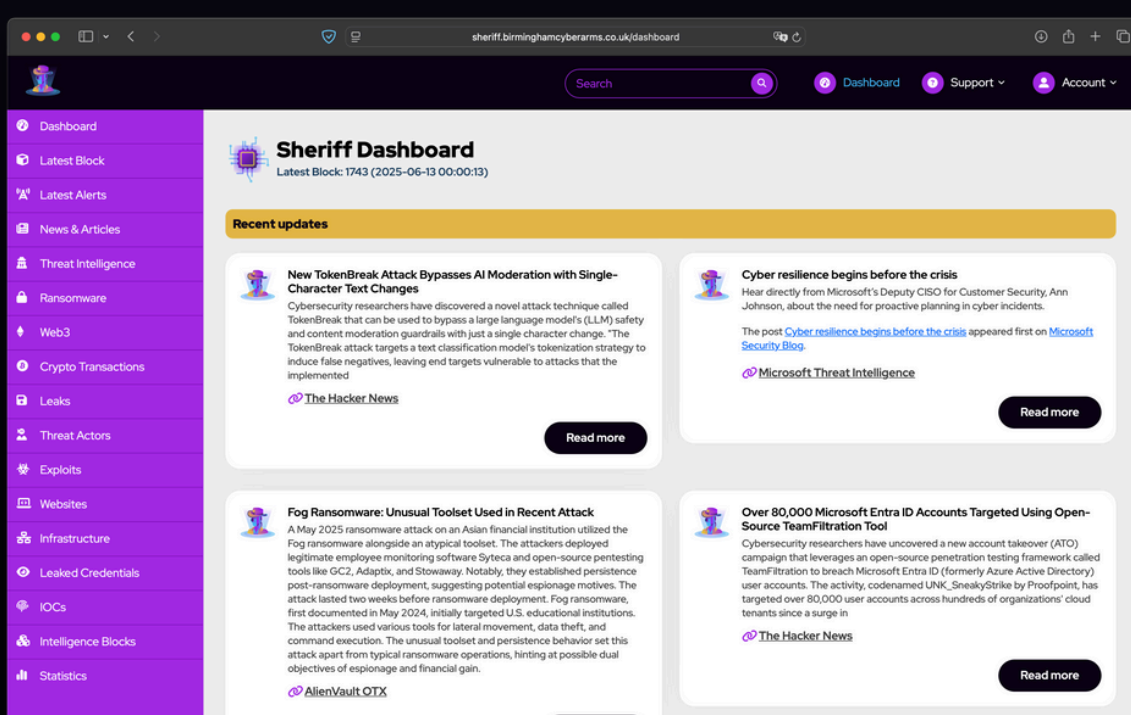

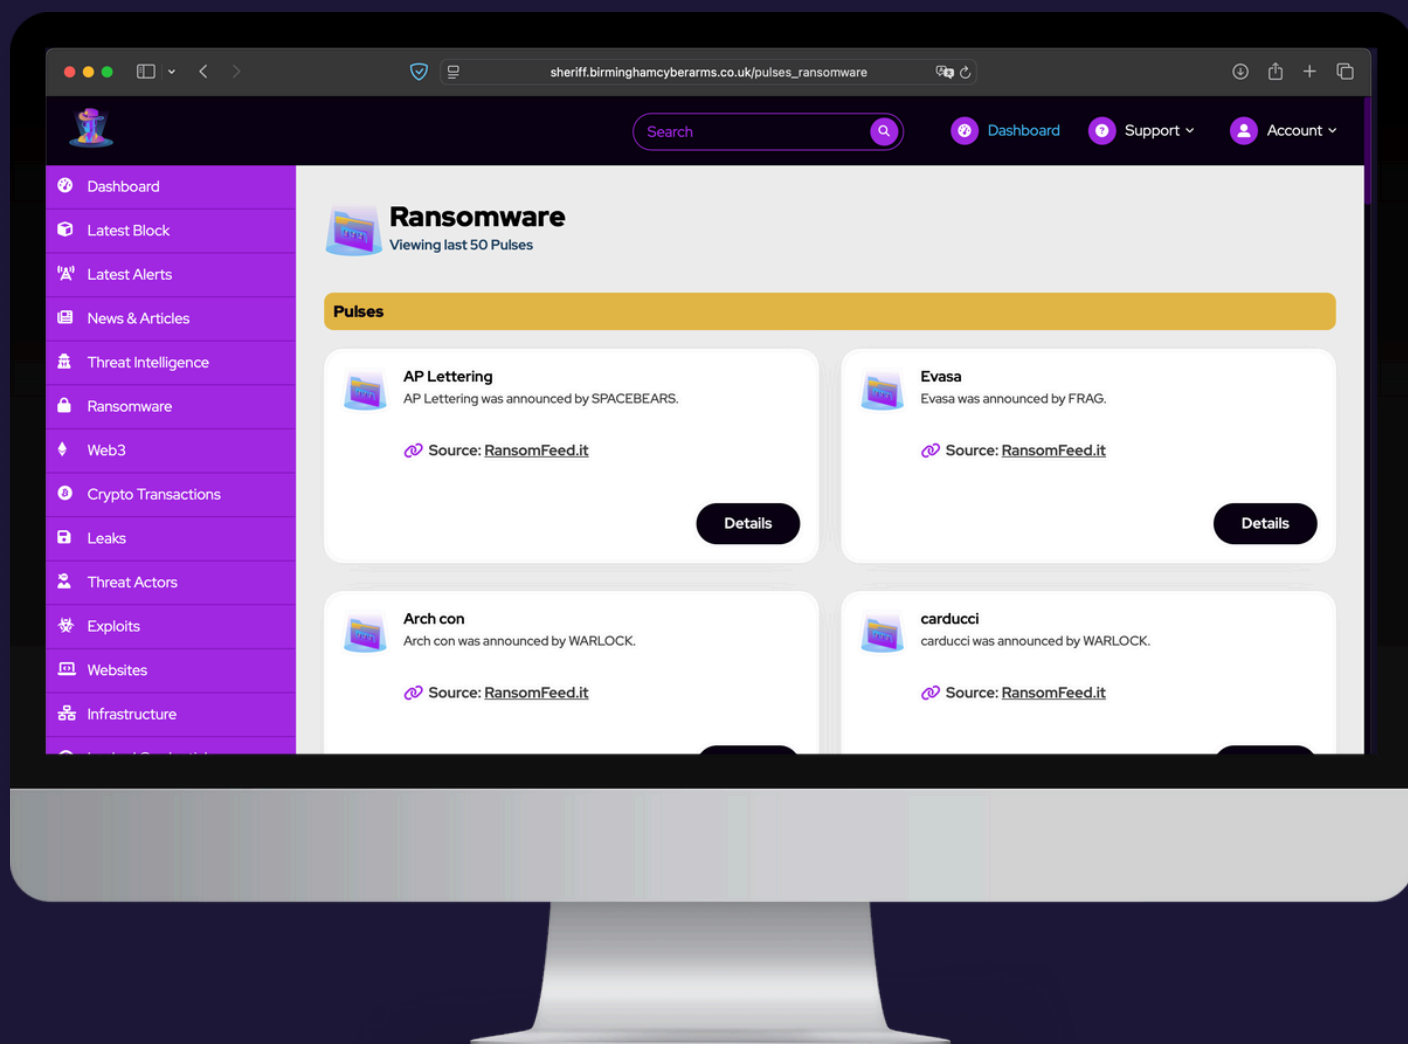

Zero-Day, Zero-Delay

We gather intelligence on newly developed or published exploits and tools that could be used to abuse vulnerabilities in enterprise environments.

Ransomware. As It Happens.

A live feed of global ransomware incidents is always available for query.

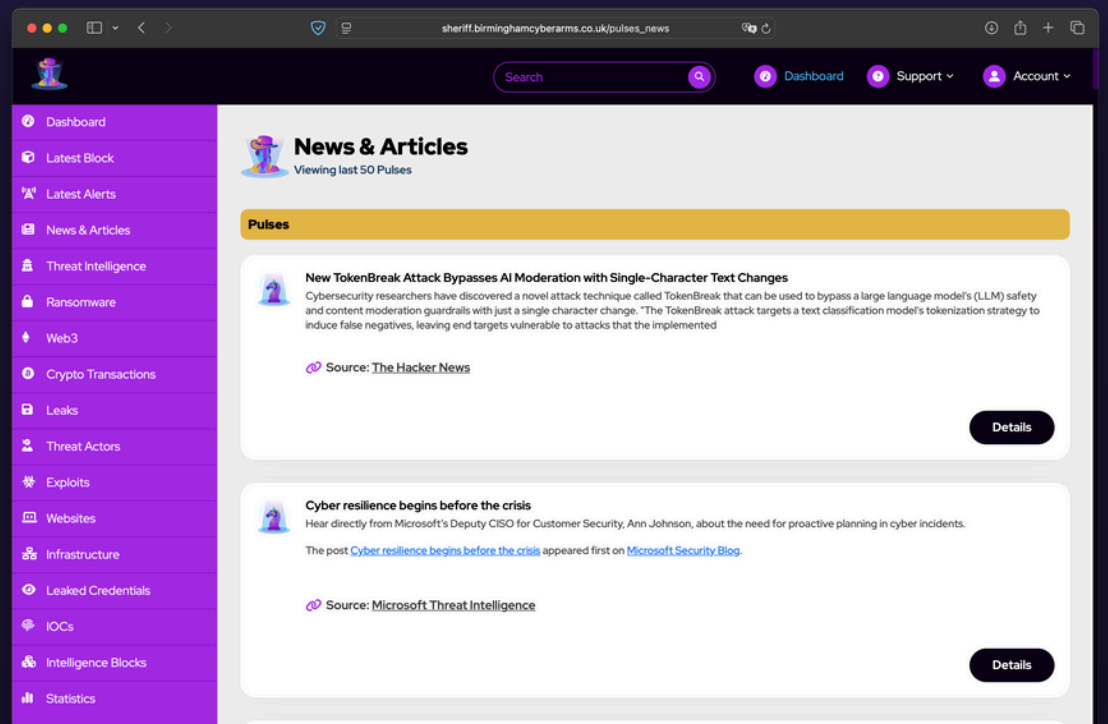

See the whole picture

Get instant insight into ongoing activity through the dashboard. Everything in your browser - just intel, no noise.

FEATURES

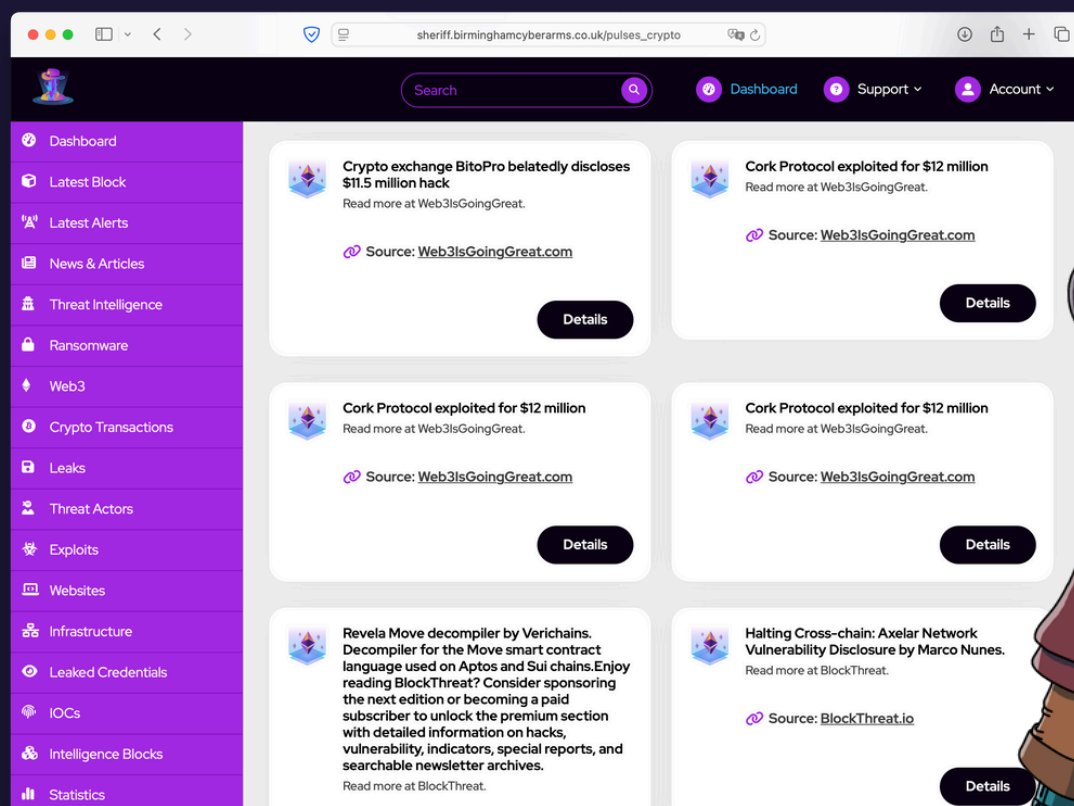

Your Morning Brief

For those who prefer an executive summary, we offer curated threat-related news in a more accessible, relaxed format.

Eyes on every chain

We provide visibility into major crypto transactions that may impact the market - whether from whales, exchanges moving funds, or projects shifting liquidity. We also track cybercrime within the Web3/Crypto space, including hacks, rug pulls, and exit scams.

In a landscape where threats evolve by the hour, timely intelligence isn't optional—it's essential. Sheriff delivers the insights you need, when you need them, with the flexibility and speed today's cyber professionals demand. From high-level summaries to deep-dive data, Sheriff keeps you informed, empowered, and one step ahead of the adversary.
